

ABSTRACT OF THE DISCLOSURE

Equipment for DVD includes a flash memory in which key data associated with information on a DVD is recorded in advance, and accesses the information on the DVD using the key data read from the flash memory. The key data is recorded in advance in
5 a specific area of the flash memory, and random data is written in advance around the key data. The key data refers to an encryption key for equipment for encrypting and recording information on the DVD or a decryption key for equipment for decrypting the information read from the DVD. Such a key is recorded, buried in the random data.
